SUMMARY

Data Engineer with **3.6 years** of experience designing and building scalable, cloud-based data pipelines on **GCP** and **AWS**. Hands-on with GCS, BigQuery, Dataflow, Cloud Composer (Apache Airflow), Pub/Sub, Dataproc, PySpark, Python and SQL. Proven experience in ETL/ELT development, orchestration, data quality validation, partitioning and analytics-ready data modeling (Star Schema), processing **2TB+ of data daily** across enterprise clients in banking, utilities and AI analytics.

TECHNICAL SKILLS

Programming Languages: Python (Pandas, PySpark, Apache Beam, Airflow DAGs, scripting & automation), SQL (BigQuery Standard SQL, joins, CTEs, window functions, query optimization)
GCP Data Engineering: Cloud Storage (GCS), BigQuery, Dataflow, Cloud Composer, Pub/Sub, Dataproc
Orchestration & Transformation: Apache Airflow / Cloud Composer, dbt, PySpark, Databricks
AWS: S3, Glue, Athena, Redshift, Lambda, IAM, QuickSight
Data Modeling & Practices: ETL/ELT, Star Schema, Medallion-style layering (staging/curated/consumption), Partitioning, Incremental Loads & Upserts, CDC, Data Quality Validation
Data Formats: Parquet, Delta, JSON, XML, CSV
DevOps & Tools: Terraform (IaC), Git, GitHub, CI/CD (Basic), JIRA, Confluence, Jupyter Notebook
Methodology: Agile / Scrum

EXPERIENCE

Fission Labs — Software Engineer (Data Engineer) **India | Apr 2025 – Aug 2026**

- Designed and built scalable **ELT pipelines on GCP** to ingest **2TB+ of daily global labour market data across 50+ countries** into Google Cloud Storage, powering skills intelligence and workforce analytics.
- Developed **Python** processing jobs (Dataflow/Apache Beam, PySpark) to clean, normalize and enrich raw data into structured skills and role taxonomies for data science teams and downstream models.
- Organized GCS into **staging, curated and consumption layers** with partitioning strategies for efficient querying at scale.
- Loaded curated datasets into **BigQuery** with optimized schemas for region- and industry-specific demand analytics; validated outputs across large semi-structured datasets.
- Wrote complex **SQL queries in BigQuery** (joins, CTEs, window functions, aggregations) to validate ingested data, run ad hoc analysis and reconcile pipeline outputs; optimized query cost using partitioned tables.
- Orchestrated end-to-end pipelines with **Cloud Composer (Airflow)** including error handling, retry logic and automated alerting; authored **Python-based Airflow DAGs** with reusable task logic.
- Built ingestion pipelines from **PostgreSQL (OLake) into a GCS raw data lake** and created BigQuery datasets and external tables after schema validation.
- Wrote reusable **Python scripts** for schema validation, data quality checks and output verification (row counts, null/duplicate checks), using the BigQuery client library for automated loads.
- Configured **incremental loads, upserts and CDC** verification using partition-based strategies for efficient data refresh.
- Designed a curated **Star Schema** layer with BigQuery staging, partitioned tables and materialized views; converted raw data to Parquet/Delta and supported KPI dashboards with **data quality checks**.

Infosys Ltd — Systems Engineer **India | Jan 2023 – Dec 2024**

- Developed data processing jobs using **Dataflow and Dataproc** to process large-scale customer data for a US utility analytics platform; orchestrated ingestion, transformation and load flows on GCP.
- Built **Python-based integrations** to connect GCP data services and downstream components, automating file handling, transformations and load jobs.
- Wrote **SQL-based ingestion and transformation scripts** in BigQuery to load, join and aggregate large datasets; created **analytics-ready views** for downstream consumers and BI dashboards.
- Delivered GCP data engineering for a European bank: analyzed Data Interface Specification (DIS) sheets and built **curated BigQuery views based on Entitlement Logic** using SQL.
- Scheduled ingestion and processing pipelines with **Cloud Composer**; managed versioning and deployment using **GitHub**.
- Worked in **Agile/Scrum** using JIRA and Confluence; coordinated with source, IT and testing teams and onboarded new associates.

CERTIFICATIONS

AWS Certified Cloud Practitioner (AWS) | Infosys Certified Python Associate | Infosys Certified MySQL Associate

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering **2018 – 2022**
Krishnaveni Engineering College for Women, JNTU Kakinada
